Sustainable Horticulture

Learn how to identify and care for plants, manage weeds, and grow your own fruit and vegetables using techniques that support long-term environmental health. This practical daytime qualification is the ideal first step for people wanting to work in horticulture, community gardens, lifestyle blocks, or to progress into further training.

You will learn how to:

- Carry out practical tasks associated with an entry level role in a primary industry context
- Use safe work practices in a primary industry context

Graduates of the Self-Management and Employability Skills strand will also be able to:

- Demonstrate self-management and employability skills in a primary industry context

Courses

CPI2.001

Safe Practices

To equip learners to engage in safe work practices in a primary industries context. This course contributes to the following core transferable skills; self/other/manaakitanga, learning to learn, specialist skills, literacy, numeracy, and digital literacy.

CPI2.002

Introduction to Primary Industries

To provide learners with introductory skills and experience for a primary industry context. This course contributes to the following core transferable skills; self/other/manaakitanga, learning to learn, specialist skills, literacy, numeracy, and digital literacy.
